1 Hidden Markov Model (HMM)

This module implements the hidden markov model. It will be used to train HMMs and recognize speech.

Module docstring and imports:

```
In [3]: """  
        This module implements Hidden Markov Models.  
        """
```

Here, we define a class which implements HMMs. To make a new HMM we have to instantiate this class.

```
In [ ]:
```
